© 2009 Steve Berczuk

Agenda

- Agile/SCM
 - How they relate.
 - Why we care
- SCM Concepts & Common Problems
- Key Patterns and Practices
- Example

© 2009 Steve Berczuk

What is Agile?

- Incremental and Iterative
- Self-Organizing Teams
- Commitment
- Feedback & Adapting to Change
- Focus on delivering value

© 2009 Steve Berczuk

Scrum Process

© 2009 Steve Berczuk

SCM

- What is SCM?
- Why do you care?
- Challenges
- What's different for Agile Teams?

© 2009 Steve Berczuk

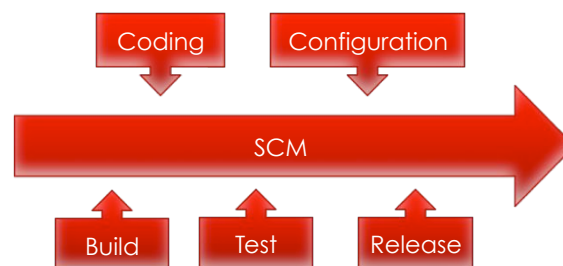

What is SCM?

- *Functions:*
 - *Identification*
 - *Control*
 - *Status Accounting*
 - *Audit and Review*
- *Activities:*
 - *Version Management*
 - *Branching and Merging*
- **Assembly**
- **Change Management**

SCM in the Lifecycle

- Setting up a workspace
- Creating a component (Integration Build)
- Validating against expected functionality
- Deploy
- Managing Parallel Releases/Maintenance
- Providing support information
- **Challenge: Right Amount of Process**

© 2009 Steve Berczuk

Not Enough Process

- "Builds for me!"
- "Works for me...!"
- "Another build is broken!"
- Ad-hoc code sharing
- Inconsistent releases.

© 2009 Steve Berczuk

Process in the Way

© 2009 Steve Berczuk

- Infrequent, Large commits
- Code Freeze
- Stabilization
- Long "Integration"

Agile Manifesto (and SCM)

- **Individuals and Interactions** over Processes and Tools
- **Working software** over Comprehensive Documentation
- **Customer Collaboration** over Contract Negotiation
- **Responding to Change** over Following a Plan

Good SCM is essential for Agile Software Development

Codelines & Change

© 2009 Steve Berczuk

Parallel Work

Branch

- Copy
- A start of parallel work

Merge

- Integrate
- Selective
- Override
- During Work
- At End

© 2009 Steve Berczuk

Locking Models

- Pessimistic Locking
 - Lock, Modify, Unlock
 - One editor at a time
 - Need to override locks

© 2009 Steve Berczuk

Locking Models

- Optimistic Locking
 - Copy, Modify, Merge
 - Concurrent Development

© 2009 Steve Berczuk

SCM In Context

© 2009 Steve Berczuk

Modular Configuration

© 2009 Steve Berczuk

SCM Practices

© 2009 Steve Berczuk

Tools

- Tools Help
- Process/Workflow First
- Qualities
 - Fast
 - IDE Integration
 - Issue Tracking Integration
 - Build Integration
 - Automation

© 2009 Steve Berczuk

Key Development Practices

- Codeline Structure
- Private Workspace
- Build
- Test
- Deploy
- (Automate)

© 2009 Steve Berczuk

Small Steps

- Changes
- Integrations
- Commits
- Modules
- Teams

© 2009 Steve Berczuk

Active Development Line

- One Development Stream
- Balance Stability, Progress
- Integrate!

© 2009 Steve Berczuk

Repository & Workspace

- Reproducibility
 - Development Workspace
 - Integration Workspace
- Repository:
 - VCS
 - Maven
- Roles:
 - Change Management
 - Tracing

© 2009 Steve Berczuk

Integration Build

- Standard Environment
- Automated
- Continuous
- Testing
- Needs to Work!
- Private Builds:
 - Similar Mechanism

© 2009 Steve Berczuk

Testing

- Unit Testing
- Integration Testing
- Regression Testing
- Test Configuration
- Balance Cost and Benefits

© 2009 Steve Berczuk

Essential Practices

- Workspace Creation
- Build
- Continuous Integration
- Simple Codelines
- Tests
- Deployment

© 2009 Steve Berczuk

Example

- Finish a release without holding up work on the next release.

© 2009 Steve Berczuk

Release Prep Line

- Branch Early.
- Release 1 work on Branch.
Use strict policy for commits.
- New Product work on MainLine.
- Relevant changes get "merged" from Branch to trunk as they occur.

© 2009 Steve Berczuk

Release Prep Codeline

Advantages

- Next Release on a stable codeline.
- New work on Mainline.

Disadvantages

- Merging is more difficult as time to release increases.
 - Mainline may change dramatically.
- Merge adds to overhead for everyone.
 - Can increase time to release.
- Team has divided focus.

© 2009 Steve Berczuk

Mainline (Agile)

- Branch late.
 - Don't branch until release is done.
- Keep team focused on release.
- Isolate features by components and configuration.

© 2009 Steve Berczuk

Mainline (Agile)

Advantages

- No branching until last possible moment.
- Team focused on release.
- No merging to add drag.

Disadvantages

- Requires good testing discipline to meet goals.
- Requires design and refactoring skill to isolate features by component.

© 2009 Steve Berczuk

Task Branch

- Branch Late.
 - Keep release on Mainline.
- New work onto task branch
- Those working on branch responsible for merges from Mainline.
- At release,
 - Create release branch from Main
 - "Copy" task branch to Mainline

© 2009 Steve Berczuk

Task Branch

Advantages

- Fewer people affected by merge issues.
- Merge issues don't delay release work.
- Highest priority is on Mainline

Disadvantages

- Mainline must be backed by tests to stay stable.
- Need an extra branch.

© 2009 Steve Berczuk

Decisions?

- Release Prep Branch
- Task Branch?
- Mainline?

© 2009 Steve Berczuk

Review

- Small, Repeatable Steps
- Deploy Early
- Branching is but one tool
- Test Frequently, and at all levels helps

© 2009 Steve Berczuk

Thank you!
